# The equipment of the motorcycle

Riding a motorcycle on a track requires suitable equipment. It is the responsibility of the participant to verify the approval of its equipment and their condition.

Tires and brakes in good condition.

Check that the level of hydraulic fluid is sufficient.

Turn signals, headlights, glass accessories must be secured by adhesives.

Remove the saddlebags.

Tighten and secure all the hardware.

The demonstration plate must be correctly attached to the motorcycle.

The registration plate must be removed or hidden.

Check the tension chain :

- if it is insufficiently tensioned it can jump and block the wheel.

Protect the sharp levers with a fitted hose by force. Ensure the hold handles.

It is highly recommended to remove or to fold the rear-view mirrors. They are useless on the track, even dangerous: using them causes a trajectory deviation.

Crutches must be either secured or removed.

Oil hoses in good condition and well insured.

Ensure the solidity of the footrests and the good performance of the rubbers.

**THE INSTALLATION OF A RECOVERY TANK WILL BE REQUIRED IN THE EVENT OF A LEAK BEING DETECTED.**
